3. Remove the grille from the Jeep®. This is done by removing the 6 plastic fasteners from across the top of the grille, removing the blinker bulbs from their housings by untwisting them, and then pulling the grill away from the vehicle from the bottom, which will release the push fasteners.

4. With the winch plate angled down (Figure 4a), manuever it down on the frame rails such that the front holes go behind the mounting plates on the front of the frame rails, and the winch mounting portion lays on the frame rails. Once in position, insert the Nut plates into the end of the frame rail, using needle nose pliers to hold them, and install the 10mm bolts and washers (Figure 4b).

5. Install grille. Installation is the reverse of removal.

6. If winch is being used, install per manufacturer's instructions.

7. Position Tube Bumper with the 12mm studs facing the vehicle. These studs go through the 8 holes on the front of the frame rails. Place bumper onto vehicle and install 12mm washers and locknuts.

3. Tighten all hardware. Reconnect Fog Lights. Installation of the Bumper is now complete!

Note: This bumper is not intended to be used for off road vehicle recovery.
