

CLOVER PATCH convert-a-top

These instructions show a TJ installation. This product contains the sail panels preventing wind drag and noise. The 2-Door JK Jeeps are the same.

1. Remove the sail panel and start folding inward about four times.

2. Once the fourth fold is done the sail panel will look like above. Place the pocket under the sail panel and insert the panel into the pocket. Now strap the pocket to the roll bar. The top strap (or both) goes over the top bow as shown in the photo below.

3. Now install the tension straps to hold the top tight. The strap hooked end attaches to the tub, goes over the third bow (last bow) and back to the buckle. Tighten this strap snug. Pulling down on the bow a little and tightening the buckle will insure a snug top.

Check all strapping from time to time. If properly installed, the Convert-A-Top will not flap and will be silent enough to allow normal conversation and radio listening on highways at speed. Long term folding of the sail panel has shown no damage beyond wrinkles that easily come out.

Please save these instructions for contact information.
