BRACKET IDENTIFICATION

↑ FRONT OF VEHICLE ↑

NOTICE

EACH BRACKET IS SPECIFICALLY MATCHED TO A LOCATION. TAKE THE TIME TO VISUALLY MATCH THE CORRECT BRACKET WITH THE CORRESPONDING LOCATION ON THE VEHICLE. TAKE NOTE OF THE NOTCHES THAT ARE USED TO HELP IDENTIFY EACH BRACKET.

Tip: Lay out each of these brackets on the ground under the location of install. Pay very close attention to the details of each and have them ready for installation.

STEP 1 - BRACKET INSTALLATION

Locate the preassembled bracket attachment track channels on the underside of platform. This will be used to secure the platform to the bracket using the 2 bolt anchor plates. (Fig 1) Place a 6mm flat washer and 6mm nylock nut on each bolt using the correct bracket for each channel. Do not fully tighten at this time. (Fig 2) **NOTE:** use (Fig 3) for track channel bracket identification.

STEP 2 - SIDE STEP INSTALLATION

Driver and passenger side bracket track channel identification. (Fig 3) Line up the side step to the vehicle and thread each M8 bolt to the body. Do not fully tighten at this time. Repeat steps for all of the brackets along both sides of the vehicle. (Fig 4)

STEP 3

Use two 10mm wrenches or a 10mm socket and 10mm wrench to securely tighten the bolts on the pinch weld. (Fig 5) Using a 10mm socket or wrench, tighten each nylock nut for the anchor bolts. Do not fully tighten at this time. Before fully securing the nuts, check that the platform is still positioned where originally placed. Once the platform is confirmed to be in the desired location, then fully tighten each bolt to secure the platform completely to the bracket. (Fig 6) Repeat steps for the other side of the vehicle. Installation is now complete.
