

FUNCTION WIRE STRIPE COLOR

Ground (GD) = White

Left Turn (LT) = Yellow

Right Turn (RT) = Green

Taillight/Marker (TM) = Brown

INSTRUCTIONS:

1. Apply grease to the terminals.
2. Plug into the vehicle and trailer.
3. Check the lighting system on the trailer for proper operation. Step on the brake to check brake lights, turn on headlamps to check tail / marker lights and operate directional signals to check right / left turn.

NOTE:

Have trailer on ball of vehicle when testing trailer functions.

When the right turn signal is activated, the LED above "RT" on the 4-wire flat should activate.

This should also be the case for the left turn ("LT"), taillight / marker ("TM") and brake ("RT" and "LT").

Grease applied to the terminals on a regular basis will help prevent corrosion.
