Sound Bar Installation Instructions

Long Tab

Long Tab

1. The JBL Upgrade Speaker System is designed to be used with the Original Factory Grills only. This gives your Jeep an O.E. look and provides maximum protection for the speakers. The speakers were shipped with the JBL grills, which was only done to protect the speakers in shipping and can not be used in this installation.

2. Using a #15 Torx Wrench remove 3 screws and the speaker grill shown in picture #1.

3. Using a #15 Torx Wrench remove the factory speaker and disconnect the plug. Pay attention to the mounting tabs on the speaker. One tab that is longer than the other two as noted in picture #2.

Reconnect plug. When you install the New Speaker, make sure the long tab on the New Speaker is installed in the same position as shown in picture #3.

4. It is recommended that the Factory Tweeter is disconnected. Simply undo the plug on the back of the Factory Tweeter. This will stop the Factory Tweeter from draining power from the JBL Tweeter and increase overall system efficiency.

The Tweeter Level is Adjustable: When the Small Button on the Front of the Tweeter is pushed in the setting is +3dB for the High Frequency. When the button is out the setting is 0dB. The Speakers are shipped with the Button Pushed In which is the +3dB (the recommended setting). You can adjust to your own taste.
