STEP 1

Put on Safety Glasses. Remove the Factory Exhaust assembly by loosening the clamp located at the pipe junction near the rear axle and extract the hangers from the rubber insulators. Be careful not to damage the OEM rubber insulators as they will be re-used to mount the new system.

STEP 2

Using the supplied 2.50" clamp install the new Exhaust Assembly by sliding the inlet pipe onto the outlet of the factory system and fitting the welded hangers into the OEM rubber insulators. With all components mounted loosely, adjust the system for overall aesthetics and clearance of frame & bodywork.

STEP 3

Once a final position has been chosen for the new system, evenly tighten all fasteners from front to rear. The supplied band clamps must be VERY tight to properly align the pipes and prevent leaks (Approximately 40ft-lbs). Inspect all fasteners after 25-50 miles of operation and retighten if necessary.
