TO AVOID OVER INFLATION, NEVER LEAVE COMPRESSOR UNATTENDED OR EXCEED RECOMMENDED PRESSURE ON OBJECTS TO BE INFLATED.

BEFORE YOU USE

Place the compressor on a flat, level dry surface. Locate the air filter. Place the threaded portion of the air filter into the threaded hole on the vented portion of the compressor. Tighten by turning in a clockwise motion. You only need to finger tighten. Do not over tighten. If the compressor needs to be assembled to the mounting plate, use the four rubber grommets to mount the legs of the compressor to the four holes in the mounting plate. The mounting plate has four rubber feet on the bottom to stabilize the compressor.

USAGE

Put on safety glasses. Attach the 1/4" quick connect coupler on the coiled hose to the 1/4" quick connect stud on the air compressor by pulling the retaining ring under the rubber covering back. Slide the fittings together firmly. While holding the fittings together, slide the retaining ring closed toward the compressor to lock.

Connect the red power clip to a positive 12-volt source, such as the battery in your vehicle. Connect the black power clip to a negative ground point. Connect the chuck by squeezing the lever and pressing the chuck onto the tire valve stem. Switch the compressor to the on position. Air will begin to flow. Watch the gauge closely. When you get to the desired pressure switch the compressor to off. Squeeze the lever and release from the valve stem. You can check the tire pressure by attaching the chuck and reading the gauge without turning the system on.
