rev 2024 P

MODEL # YJ-SPKUP

Jeep Wrangler YJ Dash Speaker Upgrade Kit '87 to '95

*Please take note that in order to show clear pictures of the installation procedure,
We used a YJ Dash Board that was removed from the vehicle.
You will not need to remove your Dash to install the new speakers.*

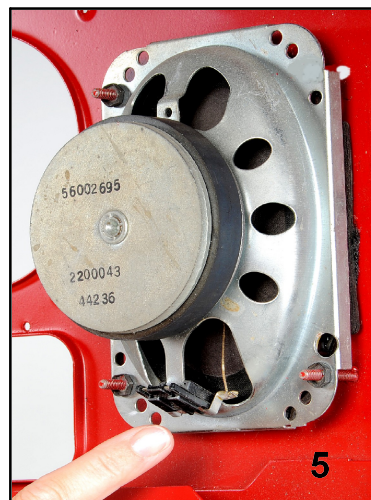

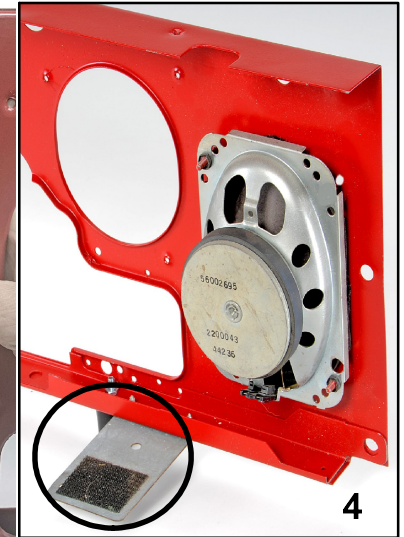

On some Jeeps you might find that the Dash Pad interferes with Drill Template. You will have to cut the template in half with a saw. Cut along the yellow line as shown in picture # 1. The Drill Template must be positioned all the way toward the door on both sides for proper alignment

The First Step Is Very Important, So Pay Attention!

Driver's Side Speaker Installation

1. Position the Black Template Plate on the Dash Board with the Top Edge just covering the First Speaker Slot as shown in picture #1. The Alignment Tabs of the Template should be inserted into the first WIDE slot which is the 4th Slot down from the top and the 1/4" Drill Hole should be facing the Driver's Door indicated by the "D" on the Template. (Picture #2 shows an **incorrect** positioning of Template...you should not see the slot above the Template.)
2. Using the 1/4" Drill that is supplied in the Kit, carefully Drill a hole as shown in picture #3. This will remove the speaker stud that is inaccessible without removing the entire Dash.
3. Using a Phillips Screw Driver, remove the two screws that hold the Plate to the Dash shown in picture #4. This plate will restrict your access to the Speaker.
4. Undo the Speaker Wire Plug from the Factory Speaker. Picture #5 shows where the Plugs are located. If your Factory Plugs have already been cut off, you will use the Color Code Chart on page 3 of the instructions to install the After Market Speaker Plugs that are included in the Kit.
5. Using the Speed Nut Removal Tool that was supplied with the Kit, remove the 3 remaining nuts from the Speaker. Shown in picture #6.
