MODEL # YJ-SPKUP

Jeep Wrangler YJ Dash Speaker Upgrade Kit '87 to '95

INSTALLATION INSTRUCTIONS

On some Jeeps you might find that the Dash Pad interferes with Drill Template. You will have to cut the template in half with a saw. Cut along yellow line as shown in picture # 13. The Drill Template must be positioned all the way toward the door on both sides for proper alignment

6. You are now ready to remove the old Speaker.
7. When trying to remove the Speaker, pull the Speaker off from the bottom two studs first. The third stud, shown in picture #7 may require you to reach up and bend the stud down to allow the speaker frame to clear the dash brace. Straighten stud after removal. (*Only a very slight bend will be required...don't break it off.*)
8. Slide the Black Spacer Plate onto the Studs as shown in picture #8. Make sure that the Notches on the Plate are on the top and face away from the Dash as shown by the arrow in picture #8.
8. Plug the Speaker Wire into the Speaker Plug. (See page 3 if your Factory Plugs were cut off)
9. Slide the Speaker Labeled "Driver Side" onto the Studs with the Label Arrow pointing down as shown in picture #9.
10. Attach the 3 Speed Nuts to the 3 remaining Studs and tighten using the Speed Nut Tool as shown in picture #10.
11. Using a Phillips Screw Driver, install the #8/32 Black Machine Screw in the Hole you Drilled in the Dash as shown in picture #11.

Passenger Side Installation

Repeat the same procedure used for the Driver's Side Speaker to install the Speaker Labeled "Passenger Side." Pictures # 12 & 13 show the proper positioning of the Black Template plate for the Passenger Side Speaker. **Drill the 1/4" hole in the Dash on the Template side labeled "P" which will face the Passenger Door.**

If your Factory Speaker Plugs have been cut off, see page 3 for detailed instructions on how to proceed.
